The Cheapest Leman Russ Ever?!

57 Imperial Armour Volume Six - The Siege of Vraks - Part Two, pg. The weapon was shown to have greatly reduced recoil due to the gun's torsion bar counter-balance mechanisms, and this provided the new tank design greater accuracy when firing on the move. This shell, known as the Auger Shell, was supposed to increase the tank's firepower, but was considered a complete failure during testing, and the production of the Auger Shell is no longer permitted for the design. The smaller shell size also allowed loaders to fire faster and carry more ammunition than the standard Leman Russ Battle Tank.[1a] The entire first batch of Conquerors produced was assigned to the Gryphon IV Skitarii forces for the Castra Campaign, where they operated alongside a battle group of the War Griffons Titans. 76 Imperial Armour Volume Seven - The Siege of Vraks - Part Three, pg. The space saved in the turret also allowed for the use of a co-axial Storm Bolter. The Leman Russ Conqueror variant differs from the standard pattern Leman Russ in that its main weapon is a Conqueror Cannon, as opposed to the Battle Cannon. The tank can also be equipped with camouflage netting, extra armour plating, a Hunter-Killer Missile Launcher, improved communications equipment, a mine sweeper, a pintle-mounted Heavy Stubber or Storm Bolter, track guards, rough terrain modifications, a dozer blade, and smoke launchers. The Conqueror is also one of only two Leman Russ tank variants that have a co-axial weapon mounted on the tank's turret, the other being the Leman Russ Vanquisher. 53-60 Imperial Armour Volume One - Imperial Guard (Second Edition), pp. They are not a single coherent force, but rather a diverse and infinite collection of war-bands and hosts under the leadership of Chaos Champions. The original designs that were recovered on Gryphon IV now reside on Mars waiting to be processed for distribution across the Mechanicus' manufactorum network and at present there are several other Forge Worlds lobbying to gain access to them. The turret also has additional armour plating on the forward side, improved air-intake valves and vents, and a rear hatch that can be used to quickly re-arm the tank and also to dispose of spent shell casings without a crew member having to leave its armoured interior. A hull-mounted Heavy Bolter or Lascannon also came standard, while the option sponson mounts can be fitted with Heavy Bolters or Heavy Flamers. 203 Imperial Armour, pp. Leman Russ tanks that are a part of an unusually well-equipped armoured regiment sometimes have 2 Multi-Meltas or 2 Plasma Cannons as their sponson weapons. 6-7, 38 Gaunt's Ghosts Omnibus: The Saint (Novel) by Dan Abnett, pg. History A Leman Russ Conqueror traversing rough terrain. During the campaign the Conquerors proved they could easily keep pace with the Titans as they encircled and trapped the besiegers of Hive Castra Septus, annihilating the traitors within the pocket[1a] and collapsing the hive in the process.[3a] Following this success production of the Conqueror increased and was exported to the Imperial Guard, where it has become popular among tank crews and unofficially known as a "breakthrough" tank. During the campaign the Adeptus Mechanicus Skitarii and the Legio Gryphonis Titan Legion were tasked with the destruction of enemy forces that were held up inside of Hive Castra Septus. This is liable to kill or wound any occupants, and can disable instruments and controls, because of breaking off the interior layers of the target and ricochets around inside a vehicle.[3c] However after seeing the limited size of use on a battlefield, these type of shells was considered a failure by many and production of these shells is no longer permitted.[1a][3c] Technical Specifications With its quality torsion bar suspension system and high power-to-weight ratio the Conqueror is considered an excellent cavalry tank, able to outmaneuver and overwhelm the enemy with mobile firepower.[2c] As with other Leman Russ tanks the Conqueror is fitted with Targeter and Auspex gear including a laser rangefinder, landscape reader and crosswind sensor. [2c] The turret has been modified with additional armour plates riveted to the forward sides, along with improved air-intakes and venting, sealed against environmental hazards with valves and mufflers, allowing it to operate in harsh terrains. 127 Imperial Armour Twelve - The Fall of Orpheus, pg. These forces take their weapons and vehicles with them, and as many of them were former members of the Imperial Guard or Planetary Defence Forces, they make use of an unknown number of Leman Russ Conqueror tanks. This reduces the power and range of the weapon but allows it to move faster and fire more accurately, making it a very versatile variant.[1a] History The Conqueror was first created on Gryphon IV when its plans were rediscovered sometime in the 38th millennium. 57 Gallery A Conqueror of the 74th Cadian Armoured Regiment, this vehicle fought in the defence of Hamman's World against Hive Fleet KrakenA Conqueror of the 101st Tallarn Armoured Regiment, this vehicle has the red and white banding of the 1st CompanyA Conqueror belonging to the 11th Mortant Armoured Regiment, this vehicle is painted with woodland camouflage for battle on the grasslands of Hellion V During field testing however it was shown that the reduced recoil of the gun made up for its reduced power with improved accuracy while firing on the move. It is armed with a Conqueror cannon, a shorter and lighter version of the Battle Cannon. The Conqueror is one of only two Leman Russ variants that make use of a co-axial weapon, the other being the Leman Russ Vanquisher. 15, 21, 40-46, 239, 247, 250, 254, 267 Imperial Armour Volume Three - The Taros Campaign, pg. The weapon's smaller size also gave the vehicle greater mobility, and allowed its loaders to keep up a high rate of fire. Now the plans reside with Mars and several other Forge Worlds are trying to get an approved access. Originally, battlefield commanders voiced concerns that the smaller cannon would reduce the available firepower and result in poor battlefield performance. The Leman Russ Conqueror is well-liked by its crews due to its speed, mobility, and high rate of fire, and it has unofficially become known as a "breakthrough" tank because of its common tactical deployment by Guard commanders to exploit gaps in the lines of enemy armour. The Conqueror-equipped Skitarii legions were able to keep up with the advance of the Titans as they attempted to encircle the hive city and trap the enemy combatants within. When the designs were originally found many within the ranks of the Adeptus Mechanicus feared that the Conqueror Cannon's smaller size would result in a loss of firepower and poor battlefield performance when compared to the standard Leman Russ' Battle Cannon, but these fears were laid to rest during the weapon's field testing. The weapon's use of smaller shells allowed the Conqueror to carry more ammunition and thus made it less reliant on re-supply during operations. The Standard Template Construct designs for the Leman Russ Conqueror were rediscovered on the Forge World of Gryphon IV sometime during the 38th Millennium. The Leman Russ Conqueror is a variant of the Imperial Guard's primary main battle tank, the Leman Russ. All Leman Russ Conqueror tanks are equipped with searchlights mounted on top of the turret which are used to illuminate enemies and are also used for nighttime communications in case of a Vox failure. Thei Mordian tanks were noted to have a blue and gold colour scheme. Sometime during the 39th Millennium the Adeptus Mechanicus Munition-Adepts of Gryphon IV tried to create a new type of shell for the Conqueror Cannon. After this success, the Leman Russ Conqueror was put into full production and was slowly but steadily exported to Imperial Guard armoured regiments around the galaxy. The entire first production run of Leman Russ Conqueror tanks was issued to the Skitarii legions of Gryphon IV, and their first action was to partake in the Castra Campaign. 74th Cadian Armoured Regiment - Fought during the defence of Hamman's World against the Tyrants of Hive Fleet Kraken 27th Konig Armoured Regiment - Part of the Caleb Reclamation Forces 8th Palladius Armoured Regiment - Fought during the Atria Wilderness Campaign 66th Arcadian Armoured Regiment - Part of the Toal III Invasion Force 11th Mortant Armoured Regiment - Fought on the world of Hellion V Armageddon Steel Legion - Fought during the Third War for Armageddon 3rd Tallarn Armoured Regiment - Fought in the defence of Balle Alpha, and during the Taros Campaign 12th Tallarn Armoured Regiment - Fought against the Tau during the Taros Campaign Vraksian Traitor Militia - The Vraksian Traitor Militia fought against Imperial forces during the Siege of Vraks Death Korps of Krieg - The Death Korps of Krieg fought against Traitor forces during the Siege of Vraks 28th Valhallan Armoured Regiment 21st Death Korps of Krieg Panzer Division 5th Blitzen Heavy Armoured Regiment 8th Pardus Armoured Regiment Mordian Iron Guard - The Mordian Iron Guard made use of the Leman Russ Conqueror during a siege of the fortress city of Coritanorum on the world of Typhos Prime in the Typhos Sector after the Typhos Prime Planetary Defence Force, the Typhos Supreme Guard, rose up in rebellion against the Imperium due to the influence of a Genestealer. Enemy forces were unable to make it past the combined force of the Titans and the Conqueror tanks and after the Titans created breaks in the defender's defensive line the Conquerors rushed into their midst, completely annihilating the Traitors. The turret also features a Searchlight and an armoured ammunition access hatch in the rear for faster re-arming and quicker disposal of spent shells without having to exit the vehicle.[1a] Next to the Conqueror cannon in the turret is a co-axial Storm Bolter, removing the need for pintle-mounted weapons (although the tank can still be outfitted to carry one, either a second Storm Bolter or Heavy Stubber. Planetary Defence Forces - The Leman Russ Conqueror is used by several Planetary Defence Forces stationed on Imperial worlds near Gryphon IV. In the 41st Millennium the Leman Russ Conqueror is an uncommon sight in most Imperial Guard regiments as the STC designs used in its construction are found only on the Forge World of Gryphon IV. The most common configuration for the sponson-mount is 2 Heavy Bolters or 2 Heavy Flamers. Although the Leman Russ Conqueror is relatively new to the Imperium's arsenal, it has already proven itself as a capable line-breaker tank, used to penetrate and surround the formations of enemy armour. The Lost and the Damned - The Lost and the Damned is the name collectively given to the multitude of beings that have turned to Chaos over the millennia, the vast majority of whom are the ordinary mortals who fight for Chaos. The warhead of such a shell consist of a soft explosive in a thin shell that is designed to break open on impact, spreading the explosive over the surface of the specific target during the microsecond before the base-mounted fuse detonates it. The Leman Russ tank has many variants, and the Conqueror is one of the most uncommon, as the Standard Template Construct (STC) designs used in its construction were only recently rediscovered by the Adeptus Mechanicus. Other common additions include Camo Netting, Extra Armour, a Hunter-Killer Missile, Improved Comms, a Mine Sweeper, Rough Terrain Modification, Track Guards and/or Smoke Launchers.[1d] Regiments known to include Conquerors Images Sources A Leman Russ Conqueror makes its way across the battlefield. The Conqueror, like all Leman Russ variants, can be equipped with two sponson mounts, one on each side. Armament Several Leman Russ Conqueror tanks moving to engage the Tau during the Taros Campaign. At Present Several Leman Russ Conqueror tanks advancing on an enemy location. Astra Militarum Portal The Leman Russ Conqueror is a less common variant of the Leman Russ Battle Tank. Proving Grounds A Leman Russ Conqueror moving through an urban battlefield. The Leman Russ is named after the Primarch of the Space Wolves Space Marines Chapter, Leman Russ, and is one of the most common armoured vehicles used by the Imperium of Man. Currently only Gryphon IV produces the Conqueror in significant numbers, though the plans also reside with Mars where a Mars Alpha pattern is also produced, and a number of other Forge Worlds have petitioned for access to the blue-prints.[1a] At some time during the 39th millennium, special munitions were created on Gryphon IV by the munitions adepts, who were trying to increase the tank's firepower with the use of "Auger" (or Augur)[3c] shells. Adeptus Mechanicus Technical Specifications Gryphon IV Pattern Leman Russ Conqueror Tank Vehicle Name: Leman Russ Conqueror Main Armament: Conqueror Cannon Forge World of Origin: Gryphonne IV Secondary Armament: Co-axial Storm Bolter Known Patterns: III - VI Traverse: 360 degrees Crew: 1 Commander, 1 Driver, 1 Main Gunner, 1 Loader, 2 Sponson Gunners (if sponsons are attached) Elevation: -8 to 20 degrees Powerplant: G4230 v12 TRM Multi-Fuel Main Ammunition: 46 Rounds Weight: 62 Tonnes Secondary Ammunition: 1000 Rounds Length: 7.08 metres Armour: Width: 4.86 metres Height: 4.42 metres Superstructure: 180 millimetres Ground Clearance: 0.45 metres Hull: 150 millimetres Max Speed On-Road: 34 kilometres per hour Gun Mantlet: 100 millimetres Max Speed Off-Road: 24 kilometres per hour Vehicle Designation: 0427-941-2002-LR0085 Transport Capacity: N/A Firing Ports: N/A Access Points: Top Hatch Turret: 200 millimetres Also See Vehicles of the Imperial Guard Leman Russ Tank Sources 13th Legion (Novel) by Gav Thorpe, Ch. 6 Imperial Armour Volume One - Imperial Guard and Imperial Navy, pp. The Leman Russ Conqueror's main weapon, the Conqueror Cannon, is a smaller and less powerful version of the Battle Cannon used on the baseline Leman Russ, but the reduced size and firepower allow the tank to move while firing and maintain a higher rate of fire. Notable Users of the Leman Russ Conqueror Imperial Guard - The Leman Russ Conqueror is used as a "breakthrough" tank by the Imperial Guard, and is used by many Imperial armoured regiments and companies that receive their vehicles from Gryphonne IV.
